

DXOP HTTP/S Communication Module

One of the easiest and most secure ways your trading partners can exchange data with you is via HTTP/S. It's as simple as connecting to a secure website through a browser and entering a user ID and password. The website is brandable, making it appear as your organization's look and feel. If you can surf the web, you can transfer a file. DataExpress offers a server-side implementation of HTTP. The HTTP protocol can be used to either collect or distribute files, all browser-based connections being initiated by the remote. In order to provide channel security for HTTP – to make it HTTP/S – a key certificate is required. These key certificates can be obtained from certificate authorities.

Technology Basics

- Designed to support existing company infrastructure
- Can easily mirror the look and feel of the current web site
- Offers stringent system security

HTTP/S Advantages

- Usability
- Security
- Administration
- Delivery

Benefits

- Customers can re-download files if they have been lost or corrupted
- Maintain and manage business growth and ROI
