

DXOP Impulse File Transfer

Impulse is an “ad-hoc” file transfer feature that uses the strong foundation of DXOP. It provides a secure method of sending and receiving files, on demand, via DXOP without requiring complex configuration. Impulse reduces an organization’s dependence on email for the delivery of large files and documents, simultaneously easing the load on the email servers while securing the content.

Browser-based

Authorized Impulse users have a browser screen on their desktop that provides them with the ability to select the files to be distributed to either one or many recipients via HTTP/s. Automatic email notification, with customizable content, is sent to the recipient(s), providing a URL and a unique one-time ID/Password token required to download the data from DXOP via a secure connection.

Impulse Features

- Easy setup and use
- DXOP standard features accurately track and account for all activity related to staging and downloading files and documents
- Ability to deliver to one or multiple recipients with one local distribution
- Tracking and accounting information available to sender only
- Customizable email text including disclaimer and use restriction information

IMPULSE FEATURES

- EASY SETUP
- SIMPLE TO USE
- SECURE FILE DELIVERY
